ADVANCED PROTOTYPING

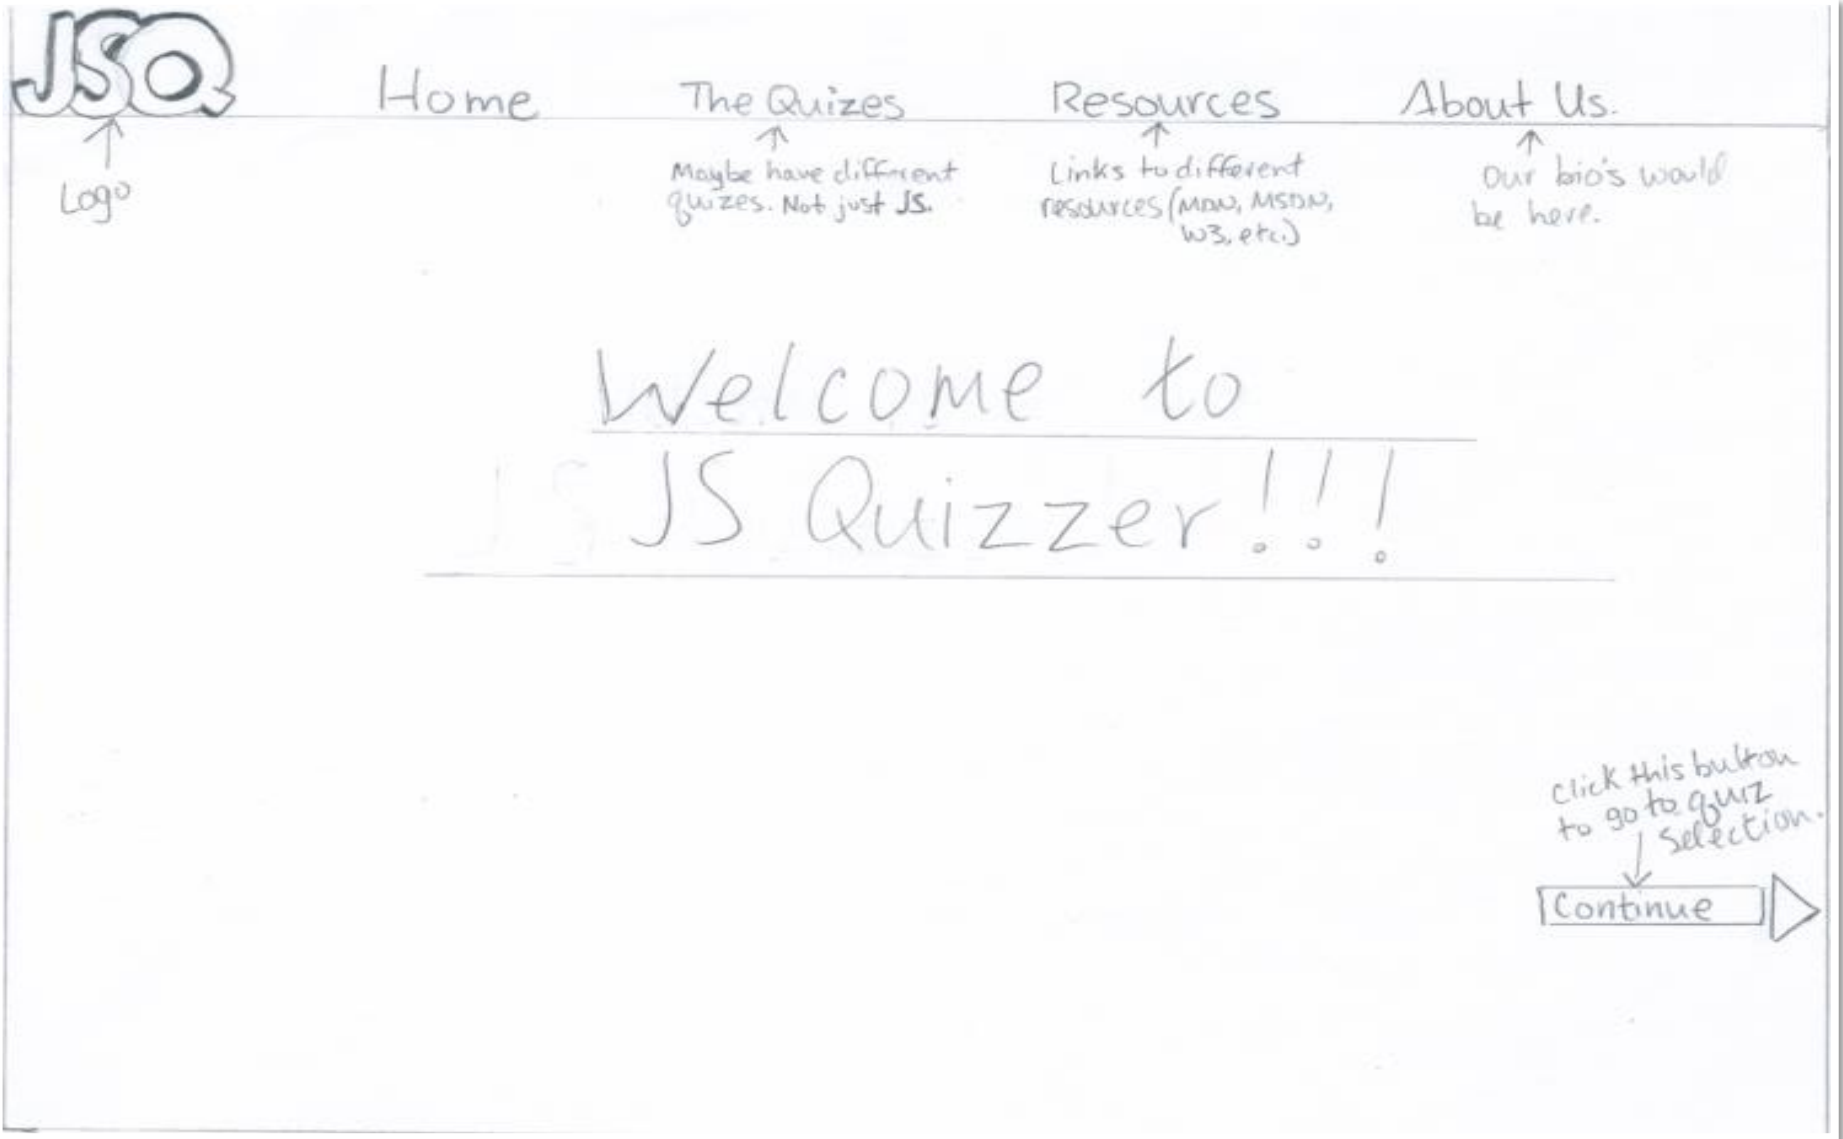

JS-Quizzer
ReviewJS

Site Prototypes

Important Note

We have decided to fragment this project into two pieces. The first and biggest piece is the JS-Quizzer piece. This will be the part of the project which powers the quizzing functionality. It will be a library and will be extensible. The second will be the ReviewJS piece. This will be the actual single page application. It will contain the models and views. The ReviewJS piece will then use the JS-Quizzer Library to power the business logic of the actual quizzing. We have decided to settle on this approach after completing sketches, so where you see JSQuizzer or JSQ, the correct replacement will be ReviewJS as displayed in the computer aided prototypes.
